EXPERIENCE

- Software Developer (Full-stack)** November 2025 – Present
WLDD Private Limited *Remote*
 - Develop backend systems for *Solo* and *Memed*, building production APIs, **internal workflows**, and admin functionalities for campaign management and creator operations.
 - Built core backend services for *Listable Labs*, implementing **AI evaluation pipelines** and **asynchronous job processing**.
 - Own development of the *ScoopWhoop* platform revamp, building backend, public website and internal CMS.
 - Built internal services like *DataDaddy*, a unified API for social media scraping services and enhanced legacy video matching service by introducing **audio fingerprinting** using spectral peak analysis.
 - Tech used:** TypeScript, Python, Express.js, MongoDB, Next.js, React.js
- Freelance Software Engineer** May 2025 – September 2025
Stealth Startup *Remote*
 - Independently developed an automated, multilingual crypto news aggregation platform.
 - Designed an **ETL pipeline** that aggregated headlines from 5+ news sources, processing **50–75 articles daily**.
 - Built an **event-driven backend** using BullMQ to orchestrate **LLM-based article generation**, translation, and automated publishing to both the website and Telegram channel.
 - Tech used:** TypeScript, Python, Astro, Hono, BullMQ, Redis, Docker
- Full-stack Engineer** May 2024 – June 2025
WNE3 *Remote*
 - Developed full-stack features for *TOBE*, a **GenAI-powered print-on-demand platform**, including merchant dashboards and internal tooling.
 - Built a **prompt enhancement and classification service** that transformed user requests into structured prompts by identifying apparel types and design categories for downstream image generation.
 - Implemented the initial **merchandise generation pipeline** and contributed to the first end-to-end product prototype used for investor pitches.
 - Tech used:** TypeScript, Python, FastAPI, Next.js, Docker

PROJECTS

- IndieLettr** | *NextJS, TypeScript, SQLite* *View Project*
 - Indielettr is a **newsletter creation and management platform** focused towards email marketing for indie creators and small business owners.
 - Co-founded & Solo-developed** the platform during Buildspace nights & weekends s5.
- CreatorDaddy** | *TypeScript, Next.js, ChromaDB, Vercel AI SDK* *View Project*
 - Built a proof-of-concept ETL and semantic search pipeline that scraped creator content, generated embeddings, and indexed them in ChromaDB for natural-language creator discovery.
 - Designed a hybrid retrieval architecture combining vector search with structured creator metadata (e.g., location, follower count, niche) to support intelligent creator recommendations.

EDUCATION

- Vidyalankar Polytechnic** Wadala, Mumbai
Diploma in Computer Engineering / Passed with 90.12% *2023 - 2026*
- All Saints High School** Kalyan, Thane
CBSE / Passed with 94% *2017 - 2023*

SKILLS

- Languages:** TypeScript, JavaScript, Python
- Backend:** Node.js, Express.js, Hono, FastAPI, tRPC
- Frontend:** Next.js, React.js, Astro, TanStack Query
- Databases:** MongoDB, Redis, SQLite, ChromaDB
- Infrastructure:** Docker, BullMQ, Git
